Dear Hiring Manager,

I am writing to express my interest in the Node.js Developer position at your organization. With 4+ years of experience designing, building, and scaling secure REST APIs and server-side systems using Node.js, Express.js, PostgreSQL, and MongoDB, I am well-equipped to contribute to your backend engineering team.

At Aurasoft Digitech, I engineered 20+ secure REST APIs with JWT authentication and role-based access control across three enterprise systems, maintaining zero unauthorized-access incidents through careful endpoint design. I optimized database queries to cut backend response latency by ~40% and automated CI/CD pipelines with GitHub Actions, reducing deployment time by ~40% while eliminating manual release errors. I also managed cloud deployments across AWS (EC2, Cognito), Vercel, Render, and VPS environments, maintaining 99.9% uptime across all production systems.

In my current role at TechyMonks, I have continued to strengthen backend reliability by improving API error handling and reducing production issues by ~20%. I bring practical experience with ORMs including Prisma, Sequelize, and Mongoose, payment integrations such as Razorpay and PayPal, and containerized deployments with Docker. I also have a track record of mentoring junior developers on backend architecture and API design through structured code reviews.

I would welcome the opportunity to bring this backend expertise and record of measurable, production-grade impact to your team. Thank you for considering my application — I look forward to discussing how I can contribute to your Node.js projects.

Sincerely,

Akalesh Tanwar
