Dear Hiring Manager,

I am writing to express my interest in the React.js Developer position at your organization. With 4+ years of experience building fast, scalable, and accessible user interfaces using React.js, Next.js, React Native, Redux Toolkit, and TypeScript, I am confident I can contribute immediately to your frontend team.

In my current role as Software Engineer at TechyMonks, I reduced production issues by ~20% through targeted frontend fixes and improved application performance by optimizing component rendering and data-fetching workflows. At Aurasoft Digitech, I established a reusable component library and optimized Redux Toolkit state management, accelerating frontend delivery by 30% and cutting duplicated code across three products. I have also shipped SEO-optimized, high-Lighthouse-score websites in Next.js and Tailwind CSS, and delivered WCAG 2.1 AA-compliant, fully responsive interfaces across enterprise and consumer applications.

Beyond component architecture and UI performance, I bring hands-on experience integrating React front ends with REST APIs, JWT-based authentication, and role-based access control, along with deployment experience on Vercel, AWS, and Render. I have also mentored junior developers on React best practices and collaborated closely with designers, product managers, and backend teams to ship features on tight Agile timelines.

I would welcome the opportunity to bring this frontend expertise and track record of measurable impact to your team. Thank you for considering my application — I look forward to discussing how I can contribute to your React.js projects.

Sincerely,

Akalesh Tanwar
